

Sample Probes

Sample probes are typically used in applications where a representative sample needs to be extracted from a process. Installing a sample probe with a valve in a nozzle allows for simple and controlled extraction. Let our subject matter experts help you design a probe to meet your requirements.

Features

- Wake frequency calculations
- Custom probe designs
 - flanged or threaded
 - retractable
 - single or multiple valves
- Pressure or temperature measurement can be added
- NACE compliance available
- Bar stock, pipe and tubing styles
- Wide variety of materials
- Customized bore diameters

Applications

Refining & Chemical

Liquids or Gases
Gas Oil
Lubricating Oil
Diesel Oil
Water/Condensate
Fuels
Acid Samples
Bio Fuels
Chemical Mixtures
Hydrocarbons
Solvents
